

**SIGNATURE CAMPAIGN FORM**

“PROTECTING HERITAGE, SECURING LEGACY,  
SUSTAINING DIBRUGARH’S GREEN TOMORROW”

Demand for Creation of “Jubeen Garg Urban Forest”

Organised by: Sustainable Green Dibrugarh, Dibrugarh, Assam.

**Appeal to You**

Dibrugarh is proudly known as the “Tea City of India.” The tea estates located within the city are not merely commercial plantations; they are the green lungs of the city, providing fresh air, ecological balance, and natural beauty to thousands of residents.

However, there is a growing concern that parts of these historic tea estate lands may be sold, converted, or commercially developed, which may lead to the destruction of valuable greenery and loss of open natural spaces in the heart of the city.

These tea gardens are home to:

- Thousands of trees and tea bushes that absorb carbon dioxide and release oxygen.
- Birds, butterflies and small wildlife that sustain urban biodiversity.
- Natural water absorption areas that help prevent urban flooding.
- A unique heritage landscape that represents the history of Assam’s tea industry.

If these green spaces disappear, future generations of Dibrugarh will lose an irreplaceable ecological asset.

Therefore, we, the citizens of Dibrugarh, strongly believe that the Government should take visionary action to protect these lands permanently for public benefit and environmental conservation.

**Our Demand**

We respectfully urge the Government of Assam to:

To acquire the tea estate land located within the city limits of Dibrugarh through appropriate legal provisions in the larger public interest. This precious green land should be preserved and developed as a protected ecological park and urban green zone (forest), to safeguard the natural beauty and environmental balance of our beloved Tea City. Let this green paradise be named “Jubeen Garg Urban Forest” in honour of the legendary Assamese musician Zubeen Garg, whose voice and spirit have inspired generations across Assam. Through this visionary initiative, the natural ecosystem will be protected and enriched, creating a peaceful space where citizens can connect with nature. The forest can offer walking trails, biodiversity parks, and environmental learning spaces, allowing people—especially children and future

generations—to experience the beauty and importance of nature in the heart of the city. *Save the Green, Save the Future.*

This initiative will make Dibrugarh a model green city in India, demonstrating how urban development and environmental protection can go hand in hand.
